Revolving Tripod Adapter Instructions

Mamiya
CAMERA CO. LTD.

This is a convenient universal tilting head which can be freely changed from a vertical format position to a horizontal format position (or vice versa) by revolving the tripod mounted camera.

Procedure:

1. Attach the revolving tripod adapter to the tripod so that the securing knob (3) faces the subject.
2. Loosen the securing knob.
3. Lift the mounting base (1) up and let it down so that the position of the arm (2) shifts to the opposite side.
4. Attach the camera to the mounting base.
5. Securely tighten the securing knob. Now the camera is set for a vertical format position.
6. When photographing with a horizontal format, first loosen the securing knob, lift up the camera, and set it down so that the mounting base returns to the original position. Then tighten the securing knob.
